Summary

Senior software engineer with 25+ years of experience building backend and server-side applications on .NET, SQL Server, and Azure. Recent work centers on payment systems, automated CI/CD, and AI-assisted development with Claude Code. I turn business requirements into clear technical designs, and I put a lot of weight on approachability and empathy in team work.

Experience

Senior .NET / Core Developer, Aaron's, Inc.

2015 – Present | Kennesaw, GA

Create and maintain web and service-based applications, with an emphasis on automated continuous integration and deployment.

- Helped cut daily autopay processing time by more than 50%.
- Helped migrate payments between providers, including building two token conversion services needed during the transitions.
- Maintain and improve the backend payment gateway service, which calls the payment provider's APIs.
- Build new internal endpoints the business needs in the payments area, using .NET, ServiceStack, Dapper, and SQL.
- Help maintain the internal payments website used by support agents.
- Monitor autopay, the payments UI, and the backend services they call, and respond to processing issues. Write KQL queries in Application Insights.
- Built our Slack hooks and helped build LaunchDarkly feature-flag integrations.
- Build and maintain payment reporting for other teams using SQL.
- Completed multiple framework upgrades and regular package updates for security patches. Took part in compliance audits and handle PII with care.
- Run automated builds and deployments with Bitbucket, Azure Pipelines, and Octopus.
- Use Claude Code daily to write and improve code, and built a Slack-command tool for maintenance and outage banners.

.NET Team Lead / Systems Specialist, Mohawk Industries

2008 – 2015 | Marietta, GA

Led requirements, design, development, and maintenance of internal and external applications and web services using Agile, while staying an active developer.

- Led internal and external development teams to meet project deliverables and deadlines.
- Gathered business requirements with users and turned them into technical requirements.
- Built a centralized payment gateway integration that tokenized card data, keeping PCI-sensitive data out of Mohawk systems.
- Exposed internal AS/400 and ERP systems to applications through API management (Sentinet).
- Built shared services: FedEx and UPS rate and return, a promotions service, an exception-logging center, and a SQL master-data repository.
- Delivered websites and intranet apps on Ektron CMS and .NET. The corporate site earned a silver Stevie Award (American Business Awards).
- Ran code reviews, technical documentation, environment setup, and SOX compliance.

IT Consultant / .NET Developer, BTG Enterprises, Inc.

1997 – 2008

Started in network administration and PC support, then moved into .NET development in 2005.

- Built and maintained client networks, hosting environments, and SQL Server back ends.
- Developed custom applications in VB and C# and wrote SQL stored procedures and scripts.
- Recommended system architectures based on application designs and best practices.

Skills

Languages & frameworks: C#, .NET / .NET Core, ASP.NET MVC, ServiceStack, Dapper, LINQ, JavaScript, jQuery, Angular, HTML / CSS

Data: SQL Server, Stored procedures, SSRS, SSIS

Cloud & DevOps: Azure, Kubernetes, Azure Pipelines, Octopus Deploy, TeamCity, Git, GitHub, Bitbucket, Application Insights

Architecture & practice: Microservices, web services (SOAP, JSON), API management, SOLID, Agile

Payment devices: Ingenico Lane/7000, SRED devices

AI: Claude Code

Education

Chattahoochee Technical College, Associate degree, Computer Programming

Northeastern University, Three years of coursework
